 Comment # 1

Please provide any additional information that might be helpful such as names of water bodies or addresses:

No study on the Pine River that I am aware of. Flooding has occurred outside the mapped flood plain area. There is also some concern that the Pine River has changed its flow path due to both man made and natural events. The section of concerns runs from the county line near the head waters to the intersection of County Hwy C and State Hwy 80

Continue on back side if necessary. Please return form to: Kristy Hanselman, Wisconsin DNR, 101 S. Webster St., WT/3, Madison, WI 53707. Form may be faxed to 608-267-2800 or e-mailed to Kristy.hanselman@wi.gov.

Please provide any additional information that might be helpful such as names of water bodies or addresses:

No study on stream. Concern of development in low areas. Have
Hub City and Rockbridge Sewage District that discharges to the Pine River.
County has a rare northern bog wetland near Hub City. Reoccurring
flooding outside mapped flood plain recently.

Please provide any additional information that might be helpful such as names of water bodies or addresses:

There is no study that we are aware of for the Bear Creek area. Richland County is currently working with a consultant (REA) on completing a ground water study and its association to flooding in the SE corner of the County.

There is currently a plan to drain surface from an area west of Spring Green and channeling it into Bear Creek. Current data and hydrology would be beneficial in enhancing the ground water study and develop mitigation and water quality strategies.

Please provide any additional information that might be helpful such as names of water bodies or addresses:

There is no study that we are aware of concerning the Mill Creek Watershed. Richland County Conservation office and the Emergency Management office are currently working on EAP's for county-owned dams in the area. A study of this section of Mill Creek would help develop a solid EAP and assist with developing mitigation strategies within the Mill Creek watershed.

The Balmoral Dam was also removed from Mill Creek in 2008. Information on the impact the dam being removed would be useful as well. Water can now flow into the wetlands and probably has changed the flood plain footprint.

Please provide any additional information that might be helpful such as names of water bodies or addresses:

Dam taken out. A revised map was done in 2010. Not sure if studied.

As to north of dam that was removed, several LOMA's have been done and

some are in the works with Brush Creek. Concern of downstream new renewable energy plant starting near Pine River. City of Richland Center has had issues with flooding and concern of Richland Center municipal sewer.
