

WISCONSIN WILDCARDS

WILDFIRE PREVENTERS

TYPE 4 (3-TON PUMPER/TANKER) ENGINE

JOB

Suppresses wildland fires in Wisconsin, especially larger fires or smaller intense fires in hard-to-get-to places.

- Hauls the tractor-plow unit on a tilt bed trailer
- Carries 850 gallons of water
- Uses a pump to apply and draft water from other sources (i.e. lakes, rivers, and swimming pools)
- Can spray class A foam, which prevents water from evaporating quickly. The Type 4 engine is also used for structural protection

FUN FACT

Did you know, class A foam is made of the same ingredients as liquid dish washing soap?
